

Information Johnson County public schools would like from Hospitals and PRTFs to help make student's **short-term** transition successful:

- 1) Educational relevant medical information; such as, if the student is taking medication that has side effects which the school should be aware of (for example, drowsy, lethargic).
- 2) If student is in high school and received academic instruction while out of school, what subjects were studied, over what dates, and grade estimation (A, B, C) commensurate with quality of work.
- 3) If student's IEP was extended while in facility, please provide copy.
- 4) Describe most recent pattern of functioning – behaviorally and emotionally.
- 5) What behavioral and academic supports are recommended in order to help the student make a smooth transition during their first week back at school? (For example, help from an adult on a class they are struggling with, verbal praise, hall pass to office of counselor/social worker/principal/psychologist)
- 6) What interventions worked for student during hospitalization that might also be tried at school (physical, environmental, sensory, other)? Be as specific as possible, for example, describe relaxation techniques.
- 7) Is there anything included in the safety plan that would be helpful for the school to know in order to help make the student's transition successful?
- 8) What are the student's concerns regarding returning to school, and what does student say he/she needs from adults to help manage those concerns?
- 9) Who should the school contact if more information is needed to help make the student's initial transition (first week) successful? Please provide name and contact information (phone and email).
